PROFESSIONAL SUMMARY

Data Science undergraduate (CGPA 8.46/10, graduating 2027) with hands-on experience across the full analytics pipeline – Python, SQL, statistics, machine learning, and data visualization. Built end-to-end projects covering data cleaning, exploratory data analysis, predictive modeling, and computer vision, translating raw data into actionable business insights. IBM-certified Data Analyst seeking Data Science, Data Analytics, or Data Engineering internship/entry-level opportunities.

TECHNICAL SKILLS

Languages: Python, SQL

Data Analysis & Manipulation: Pandas, NumPy, Data Cleaning, Data Wrangling, Exploratory Data Analysis (EDA), Statistical Analysis, Excel

Machine Learning: Scikit-learn, Regression, Classification, Feature Engineering, Feature Scaling, Model Evaluation, Supervised Learning

Data Visualization & BI: Power BI, Matplotlib, Seaborn, Plotly, Dashboarding, KPI Reporting

Computer Vision / Deep Learning: OpenCV, YOLOv8, Object Detection

Databases: SQL, SQLite, Relational Database Design, Query Optimization, Joins, Aggregations

Tools & Platforms: Jupyter Notebook, Git, GitHub, Google Colab, VS Code

PROJECTS

Amazon Sales Analysis & Business Intelligence Dashboard

- Built an interactive Power BI dashboard analyzing \$92M+ in revenue across 100,000+ orders and 300K+ units sold, enabling category-, brand-, and state-level performance tracking.
- Tracked order-fulfillment KPIs (74.6% delivered, 15.2% shipped, 3.0% cancelled) using donut-chart visuals to help identify fulfillment bottlenecks.
- Designed multi-dimensional filters (year, category, brand, payment method) and a Top 10 product leaderboard to help stakeholders quickly identify revenue drivers.
- Mapped revenue by state and category and charted monthly revenue trends to surface seasonal demand patterns and inform inventory decisions.

AI-Based Pedestrian Safety & Driver Assistance System

- Built a real-time, browser-based driver-assistance dashboard that detects pedestrians and vehicles from a live camera feed and estimates live distance-to-object using YOLOv8.
- Implemented a three-tier risk engine (High Risk, Moderate Risk, Allowed) that triggers synchronized on-screen and voice alerts when a pedestrian enters a critical distance threshold.
- Added a live multi-object summary panel (simultaneous person/vehicle counts) with directional awareness (Left/Center/Right) for situational context.
- Delivered a full local web application integrating the computer vision model with a Flask server and real-time UI, not just a notebook prototype.

CERTIFICATIONS

IBM Data Analyst Professional Certificate – Coursera

Score: 89%

- 11-course program covering Python, SQL, Excel, statistics, data visualization, and dashboard development using real-world datasets.

EDUCATION

REVA University, Bengaluru

Expected 2027

B.Tech – Computer Science and Systems Engineering

CGPA: 8.46/10

Relevant Coursework: Data Structures and Algorithms, Database Management Systems, Machine Learning, Computer Vision, Statistics, Data Analysis

ADDITIONAL STRENGTHS

- Strong analytical and problem-solving mindset with a data-driven approach to decision-making
- Proficient in translating business questions into structured data analysis and clear, actionable insights
- Comfortable working independently and collaboratively in technical, project-based teams
- Fast learner, consistently adopting new tools and techniques (e.g., YOLOv8, Power BI) to solve real-world problems
